Orion Cloud *the Hosted Solution*

Financial Management in the Cloud

Law firms need a solution to deploy robust software without the associated traditional overhead costs. Through the use of modern and mobile technology, Orion is able to provide this via the Cloud. The Cloud refers to software that is accessible through the internet and is provided on a contract basis, but maintains the complete functionality of our renowned Orion software. By utilizing a Cloud deployment, the firm is able to save on labor and capital investment.

Searching for a full-featured Cloud Solution? Orion is the Answer.

Benefits of a Cloud Solution

The Orion Cloud offering provides our full-featured Financial Management software (including Time, Billing, Accounting, etc.) without the need for specialized hardware or installation. Gone are the days of being tied to accessing your data strictly from your office. The Cloud offers you the flexibility of a secure mobile office wherever internet access is available.

Now, timekeepers at your firm will enjoy the same functionality at a coffee shop as they would at their desk in the office.

Superior Security

Security is the backbone of Orion in the Cloud, as Orion utilizes multiple strategies to provide assurance to our Clients. Our leadership has more than 100 years of combined experience working with and for law firms. We understand the ethical, fiduciary and practical aspects of safeguarding law firm and client data while at the same time providing access from anywhere, anytime and any device.

The safeguards put in place must provide constant and reliable security regardless of whether or not a user is working from their office, home or while traveling; 24 hours a day/7 days a week; and from any device capable of running a Remote Desktop Connection (RDC) - e.g., Windows- based PC, Mac, iPad, iPhone or any other smart-phone with active sync capabilities. To balance accessibility, security and privacy, Orion utilizes multiple strategies in order to provide assurance to our clients.

Examples of Software Functionality:

Matter Intake –

Customizable to the unique needs of your firm

Conflict Search and Reporting Capabilities

Custom Timekeeper Desktop –

Provides Information at a Glance

Easy Time Entry and Automatic Time Capture

Bill Preparation –

Includes Paperless Pre-Bill Distribution

Invoice Distribution –

Supports Complex Split Billing and E-Billing

Accounts Payable Imaging Module –

Includes Image Attachment

Workflow for Check Requests

AR Manager Module –

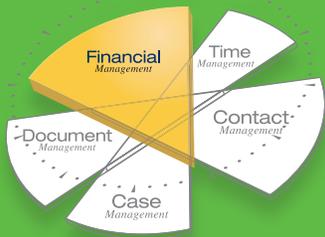

Streamlines Collection Efforts

General Ledger –

Includes Built-In Decision Support

Reporting –

Industry Leading Reporting Capabilities

Encryption Services

Communication to and from Orion's hosted environment is encrypted through a 128-bit Secure Sockets Layer (SSL). This level of end-to-end protection makes electronic eavesdropping practically impossible, whether the user is working from their law office, home or a public Wi-Fi network. Orion implements software-enabled internal security, which is built directly into the Orion software, Worldox and other applications in order to restrict individual users' access to specific data or software routines compatible with their employment designation and/or job responsibilities.

High Availability

Orion's data center is housed in a state-of-the-art colocation center managed by a Tier 1 multinational Internet Services Provider and an undisputed leader in the field. Uninterruptible Power Supply (UPS) and backup generators ensure continuous service should the power grid ever fail. The facility is both SAS 70 Type II and PCI Schedule C compliant. Fully-encrypted backups are performed of each firm's data continuously throughout the day and periodically sent to three separate data centers (geo-redundancy). This multi-layered backup strategy ensures should one replicate copy of any backup fail, there are multiple other copies available.

Data Isolation

Each law firm's software and data resides on its own private Cloud within the Orion data center, along with its own individual URL address. Different law firms do not share databases and each firm's data is segregated from all others.

Orion Provides Every Client with:

- The Most Secure Hosted Environment
- Multi-Layered Backup Strategy
- Reliable Access to Real-Time Data
- Behind the Scenes Software Updates
- Sophisticated Firewall
- Anti-Virus Technology
- Accessible from Anywhere (At Home, Travel, etc.)
- Windows PC and MAC OS Compatible

Firewall & Anti-Virus

The data center is also protected by sophisticated firewall and anti-virus/anti-spam technology which employs both reputation-enabled defenses and virus-spam-malware intrusion protection which blocks and drops potential attacks seeking access to the data entrusted to Orion. Most viruses and spam are caught and filtered even before entering the internal network. For items that do, Orion has a secondary anti-virus filtering process for added protection. This multi-tiered approach offers the strongest protection possible.

Through the usage of modern technology and superior services, Orion provides law firms with a highly secure environment should they decide against an in-house software deployment. If your management team is concerned about the security of their most important data, a Cloud deployment of Orion's Financial Management software is an excellent solution.
